# Micro-adjustment trick

***by Barb Siddiqui***

Nick Engler introduced me to the beauty of a 10-32 machine screw. When I want a micro-adjustment on a jig, I use one of these screws either in an adjustable block or by itself, depending on the jig, and because it has 32 threads per inch, one turn moves it 1/32", one half turn moves it 1/64", one-quarter turn, 1/128".
